

Nasimudheen T

MERN Stack Developer

Kerala, | nasimudheent22@gmail.com | +91 85476 36667 | LinkedIn | GitHub | Portfolio

SUMMARY

MERN Stack Developer with 1 year of experience building scalable full-stack web applications using MongoDB, Express.js, React.js, and Node.js. Strong expertise in developing RESTful APIs, implementing responsive frontend interfaces, and optimizing applications for performance and scalability. Experienced in writing clean, reusable, and maintainable code while collaborating with cross-functional teams to deliver production-ready solutions.

EXPERIENCE

MERN Stack Developer – Zaky Soft

March 2025 – Present

- Developed full-stack web applications using MongoDB, Express.js, React.js, and Node.js.
- Designed and integrated RESTful APIs for user management, authentication, and business workflows.
- Built responsive frontend interfaces using React, HTML5, CSS3, and Tailwind/Bootstrap.
- Implemented JWT-based authentication and role-based access control.
- Debugged and tested applications to ensure stability and performance.
- Optimized database queries and API responses for improved scalability.
- Collaborated with senior developers and product teams to deliver feature enhancements.
- Maintained clean, modular, and reusable code following industry best practices.

Education

Bachelor of Computer Applications (BCA), University of Calicut

2021 – 2024

Technical Skills

- **Frontend** : React, Next.js (App Router), JavaScript (ES6+), TypeScript (working knowledge), HTML5, CSS3
- **Backend Exposure**: Node.js, Express.js,
- **Databases**: MongoDB, MySQL
- **API Development**:: RESTful APIs, Axios, Fetch
- **Version Control**: Git, GitHub
- **State Management**: Redux, Context API, TanStack Query, Zustand
- **System Design**: Basic API structure, authentication flow, role-based access control
- **Authentication**: JWT, Session-based Authentication
- **Tools**: Postman, Chrome DevTools
- **Cloud (Basic Exposure)**: AWS fundamentals

Projects

Client Dashboard – Next.js Performance-Optimized Web Application

- Developed a production-ready dashboard using Next.js (App Router) with structured routing and optimized rendering.
- Built reusable and consistent UI components using shadcn/ui and Tailwind CSS following design system principles.

- Integrated RESTful APIs and managed async server-state using TanStack Query for efficient caching and data handling.
- Implemented responsive and accessible UI layouts ensuring cross-device compatibility.

EZZone – Full-Stack Event Booking Platform

git

- Developed full-stack application using MERN stack with secure authentication.
- Built REST APIs for event and booking management.
- Implemented responsive UI and optimized frontend performance.

BugTracker – Issue Tracking & Chat Application

- Designed backend APIs using Express and MySQL.
- Developed React-based dashboard and integrated real-time data updates.
- Structured database schema for scalable issue management.

Task Collaboration Portal – Role-Based Project Management System

- Built a full-stack collaboration system with Admin, Developer, and Client dashboards for managing projects and tracking progress.
- Implemented authentication and role-based access control with secure API endpoints.
- Designed MySQL relational database schema for users, projects, and project updates.
- Developed REST APIs and integrated frontend dashboard for project assignment, status updates, and file attachments.
